### Doctor's Instructions

#### Rabies Vaccination 1 year

It is common for pets to experience some or all of the following mild side effects after receiving a vaccine, usually starting within hours of the vaccination. If these side effects last for more than a day or two, or cause your pet significant discomfort, it is important for you to contact your veterinarian:

Discomfort and local swelling at the vaccination site

Mild fever

Decreased appetite and activity

Sneezing, mild coughing, "snotty nose" or other respiratory signs may occur 2-5 days after your pet receives an intranasal vaccine
