Date	Type	Staff	History
4/21/2016	I	RP	Your pet has been spayed (surgically sterilized). This will eliminate the risk of uterine infection and lower the risk of breast tumors when she gets older. Expect her to be quiet and not as active for a few days. Restrict exercise for the next 7-10 days. Keep the incision area clean and dry. If any redness appears, please call our office. Return in 7-10 days for suture removal.
